MATERIALS CERTIFICATION

All check valves manufactured by Dancar Corporation use a forged brass body with integrated brass seat. Tube extensions are available in 316L stainless steel or expanded type L copper which we purchase from Mueller Streamline. Purge connections can be compression style (available in SS or brass), or our standard 9/16-18 brass face seal, depending upon customer requirement. Internal components consist of stainless steel with stainless spring. Seal material is Viton. Working valve pressure is 500psi maximum.

All Dancar valves are manufactured following specifications which produce a product suitable for "Oxygen Service" meaning they are free of any and all lubricants and are clean to Oxygen standards. These products should only be opened in a clean area.

Based upon the above information, we certify that we meet Intel specifications for CK-70 and CK-74 in all sizes from ½" through 4". This would include the CE specification required for sale in European markets. Should you need additional information, please don't hesitate to contact us.
